

IDEATION

1. Nowadays we are all travelling with our smartphones. If there is any accident occur in the road we are travelling then it immediately tell other drivers who are travelling in the same road to take the diversion.
2. If there is any Ambulance travelling in the same road we are travelling then it immediately send notifications to other users .so that these drivers can give some space to the ambulance.
3. Based on the weather condition it indicates the vehicle to decrease the speed limit.
4. All traffic lights need to connect to each and every vehicle in the road through IOT. If the traffic light turns red then it indicates every drivers that there is an upcoming red signal inside the car itself.
5. Vehicles should have an independent app such that these road signs should be shown in the app. Due to the poor weather condition if the driver is unable to see the traffic signs in the road so that they can see the traffic signs in the app and get alerted.
